I have a project that uses angular cli and I've built an angular component library that includes one component that uses core-js: I'm currently using this library so that my component will be able to properly use a core-js function but I'm wondering if this is really necessary. I'm currently in the process of moving away from core-js in favour of babel and this has been a nightmare, but at least it works in the meantime. Does anyone know why I might be getting this error and is there any way to remove this error? The error is: ERROR in /home/me/core-js-example/src/app/core-js-example/core.js (./node\_modules/core-js/dist/core.js.4j6HNqQLHqD7f4ejC4Z7rXE5A.js): Module not found: Error: Can't resolve './node\_modules/core-js/dist/core.js' in '/home/me/core-js-example' A: As @DavidAxelrod said, you need to install core-js module using npm install core-js. This is the reason to keep on using core-js. Immunohistochemical localization of prekallikrein and factor XII in human foetal epidermis. Human foetal epidermis was studied by immunohistochemistry for the localization of prekallikrein and factor XII and by fluorescent labelling of epidermal cells with a monoclonal anti-factor XII antibody. Prekallikrein and factor XII are present in the foetal epidermis and probably in the sebaceous glands. Prekallikrein is concentrated in the upper foetal epidermis and factor XII is in the basal layer. The immunohistochemical distribution of the two
