• JPEG Copy N Size is a small application that provides you with a fast way of copying JPEG files from cameras or memory sticks to your local drives. • The interface consists of a single window that looks outdated and minimalistic, although it is easy to understand and navigate. • Considering the role of the application, the UI could use some more vivid colors and sleeker lines. • As far as the functionality is concerned, you can paste a shortcut link from clipboard or drag and drop the photos you want to copy onto the dedicated area. • Afterwards, you can select the adequate compression quality, the buffer as well as destination size, add a prefix or postfix, include a comment and select the directory where you can save the modified files. • On a side note, depending on the selected copy method, some of these options might not be available. • It could use more editing options • Granted, the program was designed to simplify and make copying files directly from your camera or a memory stick considerably faster. • On the other hand, the app feels incomplete and could use some basic photo managing options, such as crop or altering the brightness, saturation, hue, contrast, so on and so forth. • Moreover, it would be useful if it allowed you to preview the photos or at least view a relevant thumbnail. • These features could be handy when you are managing a large number of pictures with similar names and you do not want to copy them all to your computer. • Furthermore, some users would like to add custom frames or generate square photos after altering the pictures' sizes. • Lastly, it would be nice if it allowed to save the modified photo to other common file formats, such as PNG, BMP or PDF for instance.
