1. Field of the Invention The present invention relates to a cyclic imidazoline compound, a synthesis process thereof, a

---

production method of the cyclic imidazoline compound, an agent for an organic synthesis including the cyclic imidazoline compound, and an organic synthesis using the cyclic imidazoline compound.

## 2. Discussion of the Background

In the related art, a polymerizable group-containing imidazoline compound has been known as a compound having a polymerizable group (see, for example, Japanese Unexamined Patent Application Publication No. H9-301652). On the other hand, in the related art, a compound having a polymerizable group has been known as a compound having an  $\alpha,\beta$ -unsaturated

---

carbonyl group (see, for example, Japanese Unexamined Patent Application Publication No. H8-123613). However, the above-mentioned compound in the related art includes a polymerizable group which is hard to polymerize at room temperature and has difficulty in polymerizing even at high temperatures; and, thus, there is a problem that the polymerization proceeds more than expected.
