AutoCAD is the world's most popular engineering CAD software. In 2016, over 1.5 million licensed users were using AutoCAD, of which the majority was using AutoCAD LT. Here are 10 best AutoCAD tips for designers and engineers. 1. Start AutoCAD You can start AutoCAD either from Windows desktop or Mac desktop. If you choose to start AutoCAD from Windows desktop, click Start and select AutoCAD 2015. If you choose to start AutoCAD from Mac desktop, click Applications and choose AutoCAD 2015. 2. Using Drawing Layers Layers are your second-line of defense in AutoCAD. You can draw layers, layer shapes, layer symbols and text directly onto your drawing. In AutoCAD, layers are divided into several categories: Layer, Layer Symbol, Dimension, Title and Region. You can add, modify and delete layers at any time. The order of the layers in the same category determines their visibility in the drawing. For example, Layer 1 is always visible; however, if Layer 2 or Layer 3 is added, only the latter two layers will be visible. There are three types of layers: • Master (always visible): Can have any layer type and layer properties. Can't be selected. This is the default layer type. • User: Can have any layer type and layer properties. Can't be selected. • Hidden (not visible): Can have any layer type and layer properties. Can be selected. Creating a new layer: To create a new layer: 1. Click the Layer button from the Home tab of the ribbon. 2. Select Layer Type and select the desired layer type. 3. Enter a Layer Name. 4. Click the New button to create a new layer. You can change the Layer Color, transparency and properties at any time by right-clicking the layer and selecting Layer Color, Transparency and Properties from the contextual menu. You can also modify a layer's properties from the Layer Properties window. You can also create a new layer by clicking the layer you want to modify, right-clicking it and selecting Layer Properties from the contextual menu. If you want to change the layer properties

AutoCAD 360 AEC : Architectural and environmental design software. AutoCAD 360 FLEX : Interior design software. AutoCAD 360 Design : Multi-disciplinary design software. Visual programming languages AutoLISP and Visual LISP are the two visual programming languages used by AutoCAD. Visual LISP is a scripting language that is designed to be easy to use and intuitive. It is based on the BASIC programming language. In Visual LISP, macros are similar to subroutines in traditional programming languages. In AutoLISP, macros can operate on specific objects, whereas in Visual LISP macros operate on a certain selection of objects. In Visual LISP, you can call macros from any object using the CallMacro() function. AutoLISP provides the Application Programming Interface for Autodesk 3D Studio Max and Maya to allow direct communication with Autodesk's products. This interface allows automated creation and manipulation of new assets, animation, animations, camera motion, batch, script and other tasks. Another way to use AutoLISP is to create custom AutoCAD macros or Visual LISP add-ons. Many third-party developers have created add-ons to extend AutoCAD. Visual LISP is one of the programs that can be used to create add- af5dca3d97
