Open PLS Files Using Windows Media Player

format June 3, 2007 - Have you ever wanted to play PLS (webcast) files in Windows Media Player? I do for good reasons like below. 1. WMP can buffer up to 60 files. This is more than enough for a live broadcast. 2. If the translation is going backwards, then WMP can only send one file back. 3. If you want to play files even if they are in reverse, then you need to manually buffer them in Windows Media Player. 4. If you have multiple channels pls then you also have many files in the buffer. 5. If you don't know how to play the files properly, please use another player. 0946cee1be
