Adobe Photoshop's Build 1® is the first major version that didn't have any major new features, making it a great upgrade for existing users. The newest 2020 update brings the ability to quickly make multiple copies of your files, while the new Action Recorder feature lets you create simple action-based speed edit buttons. You can also use the new High Performance mode to zip your images through the editing process. Adobe also made it simpler to save your edits. This year, Adobe added a few new features for heavy-duty editing tasks, like the ability to copy multiple versions of a document at once, and the ability to merge and flatten multi-layer documents. If you like to edit many images one-by-one, you'll also appreciate the ability to save multiple versions of your document, and then pick and choose which version you'd like to work on. The 2020 update to Adobe Photoshop CC also features an improved Content-Aware Fill feature, which can intelligently identify and fill in the areas of images that are semantically similar to the rest of your photo. This, combined with simpler editing controls, make the latest release an improvement over the previous one that we tested. The new Performance Slideshow feature combines multiple images into a slideshow on the mobile app, and even adds over a dozen effects for you to choose from. And, the creators of tomorrow can now record themselves and edit the clip into a new still photo, allowing them to create shoot-if-you-can (much like video editing did before YouTube took off). Creative Cloud members get access to the new color manipulations, such as Color & Black & White, Ink & Paint, and Screen & Scroll as part of the new release.
