Some of the people who wrote me regarding Photoshop Express in Lightroom 4 and 5 indicated that they were surprised that Adobe removed the ability to remove an image from an album. In other words, it wasn't easy for those people to remove an image from a group they no longer wanted to see, just like the new version of Lightroom doesn't offer such a feature. This version of Photoshop has a new "layer style" feature, which you can use to create your own custom effects by using a series of pre-set guides and stickers, which is very similar to the manner in which Adobe added standalone custom brushes in Photoshop CS6. In this release, the layer style editor is only available in the one Photoshop tab: Layer & Adjustments. Layer styles can be applied to layers or entire images, and, as you would expect, any changes to the layer style effect are only applied to the layer's styling, and not the underlying image itself. This is a fine feature for those who want the oomph, but not the complexity of layers. For Photoshop users unfamiliar with layer styles this feature adds complexity and is not well suited for beginners. One of the main new features to painting gradients offered in Photoshop is that you can now define gradient stops using different colors with the addition of a new toggle in the Gradient Editor. Lightroom 5 now includes a new resample filter option that allows you to resample files after you've installed Lightroom 5. It's a nice addition to Lightroom 4, but you can't see how it affects the photos until after they're resampled.
