## **What's New In?**

With the advent of social networks, where people share things that are important to them, comes the risk of losing important memories and photo albums. Whether you are a smartphone user, a digital camcorder owner or if you just have a USB drive with your important pictures, it is very likely that sooner or later you will have an embarrassing moment when you do not have any way to retrieve them. A very convenient and user-friendly piece of software This is exactly the problem that the software aims to solve: it is a very simple to use and

intuitive program that quickly scans your storage devices to identify, list and recover images and videos. 2. Universal Image Viewer (iTunes) 3. Recuva 4. Photos Viewer 5. Photo Recup

A Word to the Wise... It is extremely important to know the limitations of these tools and the type of hardware they work with: 1. If you have a camera or camera phone, you can download their applications from the iTunes or Google Play stores. Some of them are free, some of them have a small price, and all of them have a couple of drawbacks. 2. A scanner is much more likely to capture the contents of your hard drive than your camera or phone. Keep this in mind when using a scanner. 3. If you have a

scanner, expect it to work with RAW formats, that is, those that have not been converted to JPG and other formats. If you need to perform multiple scans, it is often worth it to go the RAW route, unless you can make your photos JPG. The reason why is that the photo will then take less space on your scanner. This is often the only downside to using a scanner. 4. Unless you have a camera or other multimedia device, you are not likely to use the software or hardware, as most of them have an inadequate feature set. 5. If you lost all your pictures or videos, it is worth trying out some of the software or hardware on this list, however they will only serve to help you recover what you can.

However, if you have a lot of photos, it is often best to go to your local picture-printing store, and ask for help.
