Hindi Movie Song Download Free - Bangla Movie Songs, Telugu Movie Songs and Tamil Movie Songs, Hindi Movie Songs MP3, Khatta Meetha MP3 Song Download, and.Q: How would you retrieve the common lines from two sorted lists? I am writing a program that reads two sorted lists and compare their common lines to each other. For example: lstA = [1, 2, 3, 4, 5] lstB = [1, 2, 3, 5, 6] I would like to make a new list which just include the common lines from both lists. In this case: newList = [1,2,3] To make it more efficient, I am wondering if there is a built in function to accomplish this task? Thank you! A: Use this: common = [a for a in lstA if a in lstB] That way you won't need to do any sort of joining since it's just stripping out all items from one list from another. (Except for the first and last) You should probably look into whether you really want lists or sets. Set is one of the data structures in Python. It would probably be more appropriate to your situation, since you would want
