The mooring lines prevent bow thruster operation when the boat is pushing through the water, for example when pulling into a slip or launching a dinghy. Mooring line lengths Mooring lines in the bow thruster chamber attach to the outer hull of the boat. The mooring lines prevent bow thruster operation when the boat is pushing through the water, for example when pulling into a slip or launching a dinghy. For vessels under 31 ft The length of line must not be more than 32 ft for vessels measuring less than 31 ft (9.14 m). For vessels measuring 31 ft and over The length of line must not be more than 36 ft for vessels measuring 31 ft and over. Identification requirements Requiring line identification numbers for mooring lines is compulsory. If you don't carry out these checks, anyone who uses your mooring lines can have a lashing weight on the mooring line (although this might not be a legal requirement in your jurisdiction). Proper identification of each mooring line is essential so that you can easily identify which mooring line is yours at any given time. Mooring line identification numbers must be clearly and distinctly marked, usually by stencilling onto the line or wrapping paper around the line. All mooring lines must be labelled. There are four forms of identification on mooring lines: Sealable tags or labels The mooring line must have a tag or label attached to it. The label must be sealed using glue, gummed tape or another method and must stay intact. It must indicate the following: Who the label belongs to The make, model, serial number and hull size of the vessel The name and address of

Main Prem Ki Diwani Hoon (2003) Full Movie Hindi 720p HDRip Free Download. Language: .Q: how to find the difference of two arrays by date in php I have two arrays like this var time\_reqs=[1000,1245,1518,1234,1243]; var time\_calls=[1245,1518,1243,1244,1000]; I want to find out the difference in date i.e the difference between time\_calls and time\_reqs by date as the date in both arrays are same but order is different. I am stuck here in trying this. Please help me out if somebody can help in this. A: If you only want to capture the differences, you will need to do some processing. The basic principle is something like: \$time\_call = time() - \$time\_reqs[\$i]; \$calculations = array(); for (\$i = 1; \$i = 100) { //we're done, add it to calculations \$calculations[] = \$time\_cal; } } echo(count(\$calculations) - 1); However, I would suggest using date operations so you can capture date differences that simply don't match the time: \$time\_call = strtotime('2019-01-01') - \$time\_reqs[\$i]; \$calculations = array(); for (\$i = 1; \$i < count(\$time\_reqs); \$i++) { f988f36e3a
