The Last Knight .The two-stage enhancement of condylar neck fractures. This report describes the operative management of the two-stage technique for condylar neck fractures, which consists of primary fixation with Kirschner wires in conjunction with a second-stage open reduction and application of a plate. This technique results in excellent stability of the fracture fixation and is applicable to most cases of condylar neck fractures, regardless of age or associated mandibular fracture patterns. The two-stage technique was used in 28 cases of condylar neck fractures, with a minimum follow-up of 12 months. Of the 28 patients, 18 were male and 10 were female. The mean age at surgery was 29 years (range, 14 to 52 years). In this series, condylar neck fractures occurred in combination with other mandibular fractures in nine cases. The anatomic location of the condylar neck fractures included the medial and lateral sides of the condylar neck in 12 and 16 cases, respectively. There were six cases of bilateral fractures. Sixteen patients had a T-type fracture and 12 had a C-type fracture. Fracture patterns were determined by computed tomography (CT) scans. The mean follow-up time was 26 months (range, 12 to 44 months). The mean displacement was 1. f988f36e3a
