In a year from now, probably people will be remembering or at least talking about the year of 2019. At the time, I have to confess, I didn't really care much about what will happen on the future. So I have an extremely vivid dream of this - 2019 is the year for Instagram Stories. In 2019, Instagram lands on Android, iOS and TV platforms with new icons. The launch of Instagram Stories is also a splash up for 2019. Instagram Live is also going to add more high-profile speakers such as Kanye West and Stormzy. Probably, the most important change made by the community will be the way we edit pictures. Image editors have advanced a lot in the past two years. Changes keep coming and better features are introduced. However, new changes often disrupt classic editing techniques. For example, the layer snapping is great for beginners but new users often find it difficult to use. If you up until now have been using the classic interface for editing images, it's better to start with a basic tool such as Adobe Photoshop from the get-go. The most interesting new thing to watch out for for the year ahead is the introduction of Photoshop facial recognition and Open AI technology, which will bring about changes in almost everyone's digital life. The emergence of AI is a global phenomenon, and it is predicted that by 2025, Artificial Intelligence will account for 54% of the AI market. Those who are interested in the new developments in the field of AI and autonomous robotics might enjoy "AI: The Path to Systematic Futility".

With the erase tool, you can adjust the blurry parts of your image with a brush stroke. One of the greatest things about the Macintosh operating system is its intuitive interface. So when trying to find an answer, we often go to our Mac (not to Windows) and search in the System preferences or in the applications themselves because, in many cases, a feature is located here. But sometimes, especially with a software update, the answer is not there. And often, when ... This iMac (2018) does better video editing compared to my previous iMac (2015)...and I hope it is because of the new Intel A-series processor. The A10 is supposed to (better H.264?), which along with the new iMac's design allows it to do the work faster. BUT the iMac's >\$1000 price tag is too high for me to justify getting it for editing video. I could be wrong, but my hunch is that the same can be said for most people who try this because this iMac costs >\$1000. I'll wait to see what the 2017 iMac's performance will be like. If Adobe doesn't release a significantly improved version of Photoshop by then, I'll have to consider getting the iMac (2017) or perhaps return it entirely as I would to a mass-market Apple computer . I wouldn't be surprised if Apple drops this price tag in the 2017 iMac, either. (This is essentially what they did with the Apple TV [4th gen])
