Many people will use an Apple Pencil. For me personally, it goes against everything I stand for. I draw by hand and I prefer to use ball points. While some might say that ball points are looser and more natural to draw with, I say they don't. I grip my drawing fine pen with my middle and ring fingers, and I draw in a very controlled manner. Apple Pencil will alter my drawing hand, and I won't be able to maintain the same drawing style. I will be drawing with my fingers, and I will be drawing in a very methodical, drawn kind of way. Adobe Photoshop for iPad has been under development as a close collaborative effort with Apple and the Adobe Creative team since the release of the iPad 2 and iOS 7. This has created a new ground in the way photo editing is also approached on mobile. Adobe Photoshop for iPad allows you to tweak, sharpen, and adjust images in a more intuitive way. You'll be able to quickly edit your images and easily adjust exposure, brightness, and contrast. Although it has been said that most people are using iPads for their phones, I never decided to try out a photo-editing app on my iPad until I started researching tools that are going to be used in the future. At that time, I stumbled upon Adobe Photoshop Touch. Since I was in the process of learning to use Photoshop for the first time, I wanted one of the most intuitive and user friendly apps to work with. Without Photoshop Touch, it would have been a lot more difficult and complicated to perform transformations in the right way. When I started using Photoshop Touch, it really did feel like I was using Photoshop on a desktop computer. Well, the good news is that using Photoshop Touch on iPad has everyone surprised.

The Photoshop Camera app comes at a time when photography is in the midst of a shift to mobile, and Photoshop stands to benefit from going mobile as well.
